

ARVAL ACTIVE LINK

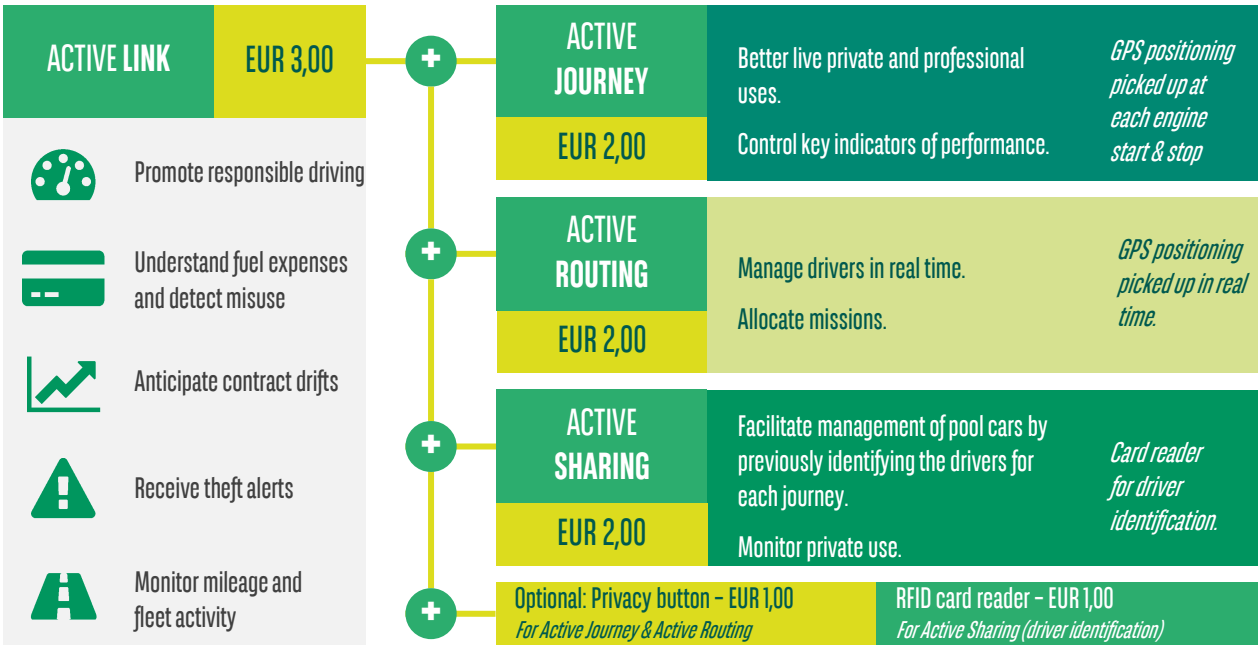

With its new onboard telematics offer, **Arval Active Link** makes sure fleet management becomes even more efficient. The automatic and real-time treatment of data collected directly from the vehicles increases the fleet manager's ability to monitor and control his fleet's TCO.

With **Arval Active Link**, your fleet's data is within reach, be it from vehicles financed by Arval or not. This major innovation answers the needs of any growing company.

Through one single, online, modular interface and a convenient dashboard, **Arval Active Link** provides monitoring of fuel consumption, average CO₂ emissions, mileage, travel time, vehicle usage, driving behavior and many more parameters.

Welcome to the connected era!

THE DIFFERENT MODULES OF ARVAL ACTIVE LINK

YOUR BENEFITS

COST REDUCTION

- > Optimization of fuel budget
- > Better monitoring of mileage for improved maintenance management
- > Improvement of driving behavior

SAFETY

- > A more reliable fleet through better anticipation of vehicle maintenance
- > Identification of "risky" drivers thanks to driving indicators
- > Driver sensibilization to adopt safe driving

PRODUCTIVITY IMPROVEMENT

- > Faster reaction times for client interventions
- > The ability to quickly find stolen vehicles

BENEFITS FOR YOUR DRIVERS

PRIVACY

- > Data privacy during private trips
- > Qualification of the drivers' professional and private trips

SAFETY AND PEACE OF MIND

- > Theft alerts with GPS positioning

PRODUCTIVITY

- > Driving statistics instantaneously available on smartphones
- > With Active Journey, the route is also made visible on all supports

ARVAL ACTIVE LINK GOES A STEP FURTHER

COMPLETE INTEGRATION OF FLEET MANAGEMENT SERVICES

- > Pro-active contract management
- > Easy implementation of training programs for drivers thanks to driving behavior analysis
- > One single access point through the Arval Connect web portal

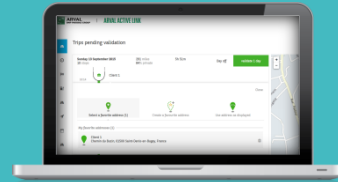

ADVANCED MANAGEMENT OF BUSINESS VEHICLE USAGE

- > Monitoring mileage in accordance with car policy requirements
- > Private trip details only visible for drivers
- > Data safety guaranteed through the experience of a large banking group subsidiary

ACTIVE JOURNEY

THIS OPTION MAKES ARVAL ACTIVE LINK EVEN MORE EFFICIENT IN ANALYZING PROFESSIONAL JOURNEYS AND IMPROVES OPERATIONAL EFFICIENCY OF FIELD MANAGERS.

GOOD TO KNOW

- Each driver has a private and secured access to the platform.
- The driver confirms the purpose of his journey from his smartphone or his computer.
- He can also do that by activating the private button when the option has been subscribed.
- For each new connection, a list of journey is supplied: either private or professional.
- Professional and private journeys can be prequalified by a list of registered addresses: office, home, client's office...

BENEFITS

This option is fully dedicated to driver and field manager (head of operations, sales representatives, etc.).

The driver can qualify its professional journeys with the possibility to extract a report. He can also manage preferred locations and visualize his driving behavior on a map, like for example, sudden breaking or unnecessary accelerations. Even better, he can access his behavior scores in terms of eco-driving and safety.

On the operational manager's side, the "Team" tab of Active Journey grants access, for a vehicle or a driver, to productivity indicators, driver behavior and fuel consumption.

YOUR OBJECTIVES

Fleet costs

Better assessment of private and business trips to improve vehicle usage policy

CSR / Compliance

Private usage management using real-time fiscal reports

Operational efficiency

Improve employee productivity
Optimize trip qualification

ARVAL

We care about cars.
We care about you.

ACTIVE ROUTING

THE GEOLOCATION OPTION FACILITATES THE ANALYSIS OF TRIPS IN REAL TIME AND THUS IMPROVES THE PRODUCTIVITY OF YOUR TEAMS.

FOCUS

The performance measurement significantly improves driving habits, with a noticeable placebo effect: according to telematics studies, drivers tend to change in a significant way their driving habits thence force they know a box has been set up in their car.

BENEFITS

To drive its business and manage priorities of its collaborators, the operational manager displays in real time on the map all of its vehicles, their location and status: on the run, stopped, parked, vehicles on private use are not displayed on the map.

On the screen, the manager identifies the driver while positioning the cursor on his vehicle pictogram. In real time he can select for example the closest vehicle to an intervention. The estimated time travel is displayed taking road traffic into consideration.

The driver can, at any time, have himself displayed as private from his smartphone or with the private button set up in vehicles equipped with the active Routing option. Therefore the GPS positioning is blocked.

YOUR OBJECTIVES

Fleet costs

Promote responsible driving

CSR / Compliance

Better mission assignments

Find vehicles the closest to specific locations

ACTIVE SHARING

THIS OPTION ALLOWS THE FLEET MANAGEMENT OF NON-ALLOCATED VEHICLES.

FOCUS

Thanks to the card reader, this option identifies the employee using the vehicle on estimated journeys. The vehicles use indicators remain the same. They are displayed with dynamic charts and synthesized templates.

Data can be downloaded on excel format to give the opportunity to the fleet manager to process the data.

BENEFITS

A car reader can identify the different drivers sharing the same vehicle. Information collected can therefore be allocated to a specific identified driver.

Which driver has used the vehicle?

When?

What about the mileage?

Duration?

Fuel consumption?

Driving behavior?...

This option provides the same benefits as those obtained while managing allocated fleet vehicles. It also gives the opportunity to track driver's behavior whichever vehicle is being used.

YOUR OBJECTIVES

Fleet costs

Makes car sharing easier

Monitor pool car usage

Keep an eye on the driving behavior of pool car users

CSR / Compliance

Assign fines to the right driver
